National Ownership and Partnerships for Capacity Development

Through the lens of Jordan’s mine-action history, the importance of strong leadership, national ownership and partnerships are detailed here as necessary for capacity development.

by Mired R. Z. Al-Hussein (National Committee for Demining and Rehabilitation) and Olaf Juergensen (United Nations Development Programme Jordan)

In 1993 His Majesty the late King Hussein bin Talal ordered the Jordanian Armed Forces to begin demining in Jordan. The King was deeply concerned by the disastrous humanitarian im- pact landmines were having upon innocent Jordanians and believed something had to be done about it. King Hussein made this decision prior to the signing of the Israel-Jordan Peace Treaty1 and four years before Jordan joined the Ottawa Convention.2 King Hussein and his wife Queen Noor set the trend for years to come by emphasizing this need.

Mine action became a national priority and was consequently viewed not only as a humanitarian imperative, but as a goal intrin- sically tied to development.

Jordan’s Lessons

To date, several lessons have been learned from the Jordanian experience in mine action. The most vital is the recognition that without political will and leadership from the top, such initiatives will fail. Mine action is slightly different from other humanitarian causes due to the great number of stakeholders involved. For instance, mine action in developing countries demands the involvement of a wide cross-section of society, including key government ministries; in the case of Jordan, the Ministries of Foreign Affairs, Interior, Defence, Planning, Social Development, Agriculture and Tourism have all played catalytic roles. The military, police, civil defense, lo- cal councils, notables, religious and mine-affected communities have also provided key contributions. In the view of the NCDR and the Jordanian government, success in mine action is sustained by strong leadership that requires all players share a common vision and objective. Without such direction, mine action will be subjected to bureaucratic obstacles and delays and will be thrown into a basket with numerous other national priorities. What is required early on is an active and committed leadership that operationally, the work was not occurring with as much speed, co- ordination or efficiency as was necessary. At this point, however, Jordan has recently redoubled its efforts and taken a different approach. Thanks to the direct support of His Majesty King Abdullah and the Jordanian government, the National Committee for Demining and Rehabilitation, which spearheads mine action in Jordan, has been able to develop into a responsible organization that knows what it wants and how to get it.

Two years ago, the NCDR formulated a national plan for mine action in Jordan, with input from all key local stakeholders and the international donor community. In addition, the United Nations Development Programme supported the NCDR with a capacity-de- velopment project, which saw the appointment of an international expert as a Chief Technical Advisor to the NCDR. The result of all these efforts is that Jordan can and will be—God willing—free of mines.8 by its Ottawa Convention9 deadline, 1 May 2009.

Partnerships and Capacity Development in Jordan

One of the true hallmarks of mine action is the vibrant networks and partnerships that have developed over the past 10–15 years. Such collaborative efforts have focused on mobilizing political, financial and human resources, and today we can point to substantial prog- ress in the sector—he is on the number of countries who have signed the Ottawa Convention or on the number of hectares returned to mine-affected communities. As noted above, capacity development in Jordan has involved all manner of local stakeholders in forging a common system (organizational framework) for mine action to oper- ate in the Hashemite Kingdom of Jordan. NCDR tabled the inte- grated national mine-action plan two years ago, and for the first time, the country approached mine action from a holistic development perspective. Prior to the drafting of the plan, the landmine problem was being approached from an engineering perspective in Jordan, and it was clear to the local leadership that operationally, the work was not occurring with as much speed, coordination or efficiency as was necessary. At this point the government sought the sup- port of UNDP—there was an internal de- mand for international involvement to pro- vide strategic and technical assistance in the strengthening of the NCDR. Since the government of Jordan and UNDP joined forces in 2004, Jordan has accomplished much in the operational and managerial areas. The NCDR has attained an active, quality-assurance capacity; socio- economic and victim information is being collected, analyzed and disseminated; and most importantly Jordan’s Article 5 obliga- tion10 is within reach. Clearly, mine action in Jordan can tap a relatively well-trained and educated population, its infrastructure is sound; and its overall mine problem is not large in comparison to other programmes. Although Jordan’s ability to reach out and utilize the existing political and technical knowledge networks has been exemplary. Also, this outreach has allowed Jordan to quickly build strong partnerships with the international community, which has seen Jordan’s vision and impact and organi- zation concerning the dual objectives of meeting its Ottawa Convention target and providing the space for human development to occur in some of the most fertile and agri- culturally important areas of the country. Although Jordan’s landmine problem is not large in size, the scope of its impact is great as the country has one of the highest popu- lation growth rates in the world, and less than 25 percent of its territory is suitable for agriculture.

UNDP Helps Find Resources

UNDP’s role in the case of Jordan’s capacity development has been to help in- troduce and draw upon the international resources that are available to mine-affected countries. First and foremost, strategic partnerships were built that al- lowed for customization of general guide- lines to what best fits the needs of Jordan. Finding the best fit has included working closely on a host of operational matters with outside technical actors, such as the Geneva International Centre for Humanitarian Demining, James Madison University’s Mine Action Information Center, the International Committee of the Red Cross, UNICEF, the United Nations Mine Action Service and Norwegian People’s Aid. On issues related to the Ottawa Convention, words of encouragement and direction have come from civil society, as well as the International Campaign to Ban Landmines and ICRC have been valuable partners. In perhaps the most important area of coop- eration—donor-partnership—the NCDR has gone from almost negligible support in 2004 to today with more than 13 donors supporting mine action in Jordan. The reg- ular flow of information (quarterly donor meetings, newsletters, etc.) and succinct knowledge networks has been exemplary. Indeed, this outreach has allowed Jordan to quickly build strong partnerships with the international community, which has seen Jordan’s vision and impact and orga- nization concerning the dual objectives of meeting its Ottawa Convention target and providing the space for human development to occur in some of the most fertile and agriculture- ally important areas of the country. Although Jordan’s landmine problem is not large in size, the scope of its impact is great as the country has one of the highest population growth rates in the world, and less than 25 percent of its territory is suitable for agriculture.
