Meeting of the States Parties to the Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-Personnel Mines and on Their Destruction

Fifteenth Meeting
Santiago, 28 November - 1 December 2016
Item 10 (e) of the provisional agenda
Consideration of the general status and operation of the Convention Destroing stockpiled anti-personnel mines

The status of implementation of Article 4 (Stockpile destruction) of the Anti-Personnel Mine Ban Convention

Draft conclusions of the President of the Fifteenth meeting of the States Parties

Submitted by the President of the Fifteenth meeting of the States Parties

I. Introduction

1. At the Maputo Review Conference in 2014, States Parties agreed that the President of the Meetings of the States Parties would be mandated to "take the lead with respect to any issue related to the pursuit of the Convention’s aims other than those related to the mandates of the Committees, including matters related to stockpile destruction under Article 4 and transparency regarding the exceptions contained in Article 3 of the Convention."

2. The mandate of the President further indicates that the President can present a preliminary report on activities at intersessional meetings, if need be, as well as present a final report on activities, as well as conclusions and recommendations if relevant, at Meetings of the States Parties or Review Conferences. In this context, the President of the Fifteenth Meeting of the States Parties presented at the Convention’s 2016 intersessional meetings a preliminary report on the status of implementation of Article 4 stockpile destruction obligations and observations in this regard.

3. At the close of the 30 November-4 December 2015 Fourteenth Meeting of the States Parties, five States Parties had reported that they were still in the process of implementing Article 4 of the Convention, including three States Parties — Belarus, Greece and Ukraine — that have missed their deadline for the completion of Article 4 and two States Parties — Oman and Poland — with deadlines still to come.
4. On 19 April 2016, the President of the Fifteenth Meeting of the States Parties (hereafter referred to as "The President") wrote to Belarus, Bulgaria, Greece, Oman, Poland and Ukraine to encourage them to provide updated information at the 19-20 May 2016 intersessional meetings on their effort to comply with the Convention’s obligation to destroy all stockpiled anti-personnel mines. At the 19-20 May 2016 intersessional meetings, Belarus, Greece, Poland and Ukraine provided updated information on their efforts to comply with Article 4.

5. As part of the transparency measures which exist under this Convention, each year, no later than 30 April, States Parties should provide updated information on a number of matters including on the number of stockpiled anti-personnel mines held, the status of programmes for the destruction of stockpiled anti-personnel mines and the number of stockpiled anti-personnel mines destroyed in the previous calendar year.

6. Of the five States Parties, which at the close of the Fourteenth Meeting of the States Parties had reported they were still in the process of implementing Article 4 of the Convention, as of 30 April 2016, all five submitted updated information in accordance with the relevant provisions of Article 7 on stockpiled anti-personnel mines. The President recalled that the preparation of conclusions on the status of implementation of Article 4 of the Convention was dependent on the submission of updated transparency information by the relevant States Parties.

7. Two States Parties — Bulgaria and Germany — reported that stockpiled anti-personnel mines were transferred to their territory for the purpose of destruction.

II. Information provided by States Parties on the implementation of Article 4

Maputo Action Plan, Action #5:

8. In the Maputo Action Plan, it was agreed that "each State Party that has missed its deadline for the completion of its Article 4 obligations will provide to the States Parties, through the President, by 31 December 2014, a plan for the destruction of all stockpiled anti-personnel mines under its control or jurisdiction as soon as possible, and thereafter keep the States Parties apprised of efforts to implement its plan through annual transparency reports and other means."\(^1\)

9. **Belarus**, on 29 December 2014, provided information noting the technical complexity associated with destroying the PFM-1 type mine, and that, as of 3 November 2014, 3,370,316 mines remained to be destroyed. Belarus further reported that, according to the estimate of the company Explosivos Alaveses SA (EXPAL), all mines, apart from those considered being in an unsafe condition, will be destroyed by 1 November 2016 by EXPAL.

10. At the Convention’s June 2015 intersessional meetings, Belarus clarified that it intended to destroy all stockpiled anti-personnel mines on its territory. Belarus also indicated that EXPAL had asked for an extension of the agreement between Belarus and the European Commission until the end of 2017.

11. At the Convention’s Fourteenth Meeting of the States Parties in December 2015, Belarus indicated that the project between the European Commission and Belarus was extended until August 2020 and the contract between the European Commission and

\(^1\) Maputo Action Plan, Action #5.
EXPAL until February 2018. Belarus further informed that the deadline to complete the destruction of its remaining stockpile is set by EXPAL in agreement with the European Commission and therefore Belarus relies on its project partners for completion.

12. Also at the Convention’s Fourteenth Meeting of the States Parties, Belarus clarified that the destruction of anti-personnel mines considered in an unsafe condition will not be under the responsibility of EXPAL but under the responsibility of Belarus and it indicated that no such mine has yet been found.

13. At the 19-20 May 2016 Convention’s intersessional meetings, Belarus indicated that the project was expected to be completed by the end of 2017. Belarus further indicated that the Government of Belarus, the European Commission and EXPAL continue their effective interaction to resolve the outstanding problems expeditiously. The President concluded that Belarus has provided relevant information in accordance with Action #5 of the Maputo Action Plan. In this regard, the President emphasised that Belarus should continue, in accordance with Action #5, to “keep States Parties apprised of efforts to implement its plan through annual transparency reports and other means.”

14. Greece, on 31 December 2014, provided information noting that, on 1 October 2014, an explosion occurred at the facilities of the company in Bulgaria contracted to destroy Greece’s mines and that work has been suspended indefinitely. Greece further indicated that it is reviewing all possible options in an effort to adhere to its initial intention to complete the destruction of all stockpiled anti-personnel mines by the end of 2015. Greece reported that, as of 31 December 2014, a total of 690,351 anti-personnel mines remained to be destroyed.

15. At the Convention’s June 2015 intersessional meetings Greece reported that it was in discussions with the Bulgarian authorities regarding the return to Greece of anti-personnel mines that had been transferred to Bulgaria, that cooperation between the two States Parties was excellent and that preparations were underway that would see all remaining stockpiled anti-personnel mines destroyed by Hellenic Defence Systems at its plant in Lavrio, Greece. In addition, Greece further noted that it would provide, to the Fourteenth Meeting of the States Parties, a timetable for the completion of stockpile destruction.

16. At the Convention’s Fourteenth Meeting of the States Parties in December 2015, Greece indicated that the ongoing financial crisis had delayed infrastructure preparations at the destruction site in Lavrio, Greece, and the procurement of the necessary equipment. Greece further indicated that a realistic timeline for the destruction of the remaining anti-personnel mines will be established once the preparatory process in completed and the facilities have been inspected.

17. At the 19-20 May 2016 Convention’s intersessional meetings, Greece indicated that the facilities of Hellenic Defence Systems in Lavrio await certification in accordance with international safety and environment standards during the demilitarization process of the anti-personnel mines. Greece further indicated that it is estimated that the procedures will be completed in the next four months notwithstanding any future unforeseen circumstances. Greece indicated that thereafter an amended contract between the Ministry of National defence and Hellenic Defence Systems will be signed in order to establish a definite timetable for the destruction of the remaining stockpiles and Greece committed to inform the States Parties one a timeline is set. The President concluded that while Greece had provided updated information on its efforts to implement its stockpile destruction
programme, it may want to provide as soon as possible an updated timeline for the destruction of the remaining stockpiled anti-personnel mines.

18. **Ukraine**, on 29 December 2014, indicated that "the Ukrainian side plans to present all the information available regarding the destruction of all stockpiled anti-personnel mines under its control or jurisdiction during the Meeting of Experts of States Parties to the APLC to be held in 2015."

19. At the Convention’s June 2015 intersessional meetings, Ukraine reported that all stockpiled anti-personnel mines in areas under Ukraine’s jurisdiction are also in areas under its control, with the exception of 605 stockpiled anti-personnel mines, which are in areas outside of Ukraine’s effective control. Ukraine further reported that no stockpile destruction was taking place given financial constraints and that talks were being held concerning obtaining financial assistance necessary to complete destruction.

20. At the December 2015 Fourteenth Meeting of the States Parties, Ukraine reiterated that 605 OCM-4 mines are located in areas outside of Ukraine’s effective control. Ukraine also informed that since February 2014, funds are primarily allocated to the training of the defence forces and the destruction of stockpiled anti-personnel mines has been suspended. Despite the difficult economic situation, Ukraine informed that it will resume the destruction of stockpiled anti-personnel mines of the PFM-1 type in the near future and that to that end, a second agreement has been concluded on 19 October 2015 between the Ministry of Defence, NATO Support and Procurement Agency (NSPA) and the State Enterprise Pavlograd Chemical Plant to destroy 3 million PFM-1 type mines. Under this agreement, a contract was signed on 26 November 2015 to destroy 642,960 units of PFM-1 type mines in 2015 and 2016 at the Pavlograd Chemical Plant which is under the authority of the Space Agency of Ukraine. The President noted that Ukraine had still not provided a plan for the destruction of all stockpiled anti-personnel mines under its control or jurisdiction in accordance with Action #5 of the Maputo Action Plan. The President further noted that additional details on the latest agreement signed by the MoD, NSPA and the Pavlograd Chemical Plant would be welcomed, in particular information on a timeline for the destruction of the 3 million PFM-1 type mines.

21. At the 19-20 May 2016 Convention’s intersessional meetings, Ukraine replied to the President’s observations and indicated that the aim of this contract was to determine the cost of destruction of one mine and a fixed contribution of Ukraine of no more than 25 cents per mine. The President noted that while Ukraine had provided more information on the latest agreement, Ukraine had still not provided a timeline and a plan for the destruction of all remaining stockpiled anti-personnel mines under its jurisdiction or control. On 26 July 2016, the President wrote to Ukraine to request further information on a timeline for the destruction of the 3 million PFM-1 type mines and a plan for the destruction of all stockpiled anti-personnel mines in Ukraine.

22. In information provided by Ukraine to the President on 16 August 2016, Ukraine indicated that the timeline for the destruction of 3 million PFM-1 type anti-personnel mines depended on the production capacity of the State enterprise “Scientific-Production Association — Pavlograd Chemical Plant” which is the only actor in Ukraine authorised to conduct anti-personnel mines disposal. Ukraine further indicated that with the current rate of utilization, these 3 million mines are expected to be destroyed by 2019. Ukraine also indicated that the destruction of all stockpiled anti-personnel mines, depending on the production capacity of the authorised contractor, was expected to be completed in 2021. The President concluded that Ukraine has provided information on its efforts to implement its stockpile destruction programme, including by providing a timeline for completion of the programme.
Maputo Action Plan, Action #6:

23. In the Maputo Action Plan, it was agreed that "each State Party in the process of destroying its stockpiled anti-personnel mines will regularly communicate to the States Parties, through annual transparency reports and other means, plans to fulfil its obligations and progress achieved, highlighting as early as possible any issues of concern." As of 1 September 2016, updated information on the total of all stockpiled anti-personnel mines owned or possessed by it, or under its jurisdiction or control, and/or on anti-personnel mines transferred for the purposes of destruction, and/or the status of programmes for the destruction of stockpiled anti-personnel mines and/or on the types and quantities of all stockpiled anti-personnel mines destroyed was provided by: Belarus, Greece, Oman, Poland and Ukraine. The President concluded that of the five States Parties still in the process of destroying stockpiled anti-personnel mines, all five had submitted updated information in accordance with their Article 7 obligations. The President further concluded that the provision of updated information through annual transparency reports was of utmost importance to take stock of progress and challenges in the implementation of the Article 4 stockpile destruction obligations.

24. In information provided in 2015 by Belarus in accordance with its Article 7 transparency obligations, Belarus reported that 2,862,068 stockpiled anti-personnel mines remained to be destroyed as of 1 January 2015, that a cumulative total of 806,307 stockpiled anti-personnel mines had been destroyed by 1 January 2015. Information was provided on the quantity and lot numbers of each type of anti-personnel mine. At the Convention’s June 2015 intersessional meetings, Belarus reported that, during the period 26 March 2014 to 1 June 2015, 899,856 stockpiled PFM-1 type anti-personnel mines had been destroyed.

25. At the Fourteenth Meeting of the States Parties in December 2015, Belarus reported that by November 2015, a total of 1’414’688 mines had been destroyed under the project with the European Commission and the EXPAL company (of the original total of over 3.3 million mines).

26. In information provided in 2016 by Belarus in accordance with its Article 7 transparency obligations, Belarus reported that 1,862,080 stockpiled anti-personnel mines remained to be destroyed as of January 2016, that a cumulative total of 1,806,296 stockpiled mines had been destroyed by 1 January 2016. Information was provided on the quantity and lot numbers of each type of anti-personnel mine. At the 19-20 May 2016 Convention’s intersessional meetings, Belarus reported that as of the date of the intersessional meetings, 2,185,032 PFM-1 mines have been destroyed, representing 64.3 percent of the total quantity of stockpiled anti-personnel mines held by Belarus. The President concluded that while Belarus has provided regular information on stockpiled anti-personnel mines destroyed, the provision of information on the total number of stockpiled anti-personnel mines remaining to be destroyed by Belarus would be welcomed.

27. In information provided in 2015 by Bulgaria in accordance with its Article 7 transparency obligations, Bulgaria reported that 500,590 stockpiled anti-personnel mines had been transferred from Greece to Gorni Lom, Bulgaria for the purposes of destruction. Information was provided on the quantity of each type of anti-personnel mine. Bulgaria reported that the institution authorised by Bulgaria to receive the transfer was VIDEX JSC. At the Convention’s June 2015 intersessional meetings, Bulgaria reported that, on 1 October 2014, when an explosion occurred at the VIDEX destruction plant, 197,600 anti-personnel mines were stored at the plant. Of this number, 6,986 anti-personnel mines were...
destroyed during the explosion or recovered and destroyed afterwards, and 190,614 anti-
personnel mines remained. Bulgaria further reported that Bulgaria and Greece were in
consultations regarding the return of these mines to Greece.

28. At the Fourteenth Meeting of the States Parties in December 2015, Bulgaria
informed that Greek experts visited the storage site of the remaining stockpiles in July 2015
and discussed with their Bulgarian counterparts the modalities for their return. Bulgaria
reported that it had undertaken all legal measures needed to export the anti-personnel mines
to Greece and that the mines are kept in sealed and secured warehouses of the factory.
Bulgaria further reported that it expected the constructive cooperation with Greece to
continue to solve the issue as soon as possible.

29. At the 19-20 May 2016 Convention’s intersessional meetings, Bulgaria indicated
that it took note of the challenges that the Greek authorities should overcome in order to
continue with the destruction process and stressed that the process of transferring back the
mines and the licensing issues of the factory in Lavrio are not directly interrelated. Bulgaria
also underlined that if the transportation begins later than 31 August 2016, it would be
highly unlikely that the whole process will end by the end of 2016. Bulgaria further
indicated that the village where the company’s facilities are located is in a mountainous
area which makes the access after 1 October 2016 by specialised trucks for transportation
of the anti-personnel mines too risky. The President noted the importance of continued
transparency on this issue and concluded that it was positive that Bulgaria regularly
provided updated information on stockpiled anti-personnel mines that had been transferred
to its territory for the purpose of destruction by another State Party.

30. In information provided by Greece in 2015 in accordance with its Article 7
transparency obligations, Greece reported that 690,351 stockpiled anti-personnel mines
remained to be destroyed as of 31 December 2014, that 500,590 stockpiled anti-personnel
mines had been transferred to Bulgaria for the purpose of destruction in 2014, that of these
500,590 mines 262,934 had been destroyed in 2014, and that, in total to date, 877,816 have
been destroyed. Information was provided on the quantity of each type of anti-personnel
mines. At the Convention’s June 2015 intersessional meetings, Greece reported that, as of
that time, 643,309 stockpiled anti-personnel mines remained to be destroyed, including
452,695 mines stored in Greece and 190,614 stored in Bulgaria. As noted, both Bulgaria
and Greece reported in June 2015 that they were in discussions related to the return of these
190,614 mines to Greece for destruction.

31. At the Fourteenth Meeting of the States Parties in December 2015, Greece informed
that the Ministry of Defence had contracted the Hellenic Defence Systems (HDS) company
to destroy the remaining 643,265 anti-personnel mines, of which 452,695 are stored in
military warehouses in Greece and 190,570 in warehouses of VIDEX company in Bulgaria.

32. In information provided in 2016, in accordance with its Article 7 transparency
obligations, Greece reported that there were 643,265 remaining stockpiled anti-personnel
mines to be destroyed, 190,570 of which are stored in VIDEX warehouses in Bulgaria.
Greece further reported that in the present phase 942,902 anti-personnel mines have been
destroyed. The President noted that there seemed to be a discrepancy between the number
of stockpiled anti-personnel mines reported stored in Bulgaria in 2015 (190,614) and those
reported in 2016 (190,570).

33. At the 19-20 May 2016 Convention’s intersessional meetings, Greece replied to the
President’s observations indicating that the discrepancy between the number of mines
reported in 2015 and 2016 is due to the fact that the 190,570 reported in 2016 do not
include the mines destroyed during the explosion, the mines ineligible for transportation
and those that were used by the Bulgarian authorities to conduct an investigation
experiment on the origins of the explosion at the Videx facilities. The President concluded
that while it was appreciated that Greece had explained the discrepancy between the
number of mines, updated information on the status of discussions concerning the return of
anti-personnel mines transferred to Bulgaria would be welcomed.

34. At the Fourteenth Meeting of the States Parties in December 2015, Oman reported
that it is committed to destroying its stockpiled anti-personnel mines in the period stipulated
in Article 4 of the Convention. Oman further reported that a schedule has been developed
with the stakeholders to implement the Convention and the first batch of mines was
destroyed in September 2015.

35. In information provided by Oman in 2016 in accordance with its Article 7
transparency obligations, Oman reported that 1,526 stockpiled anti-personnel mines were
destroyed in two batches, a first batch of 826 mines on 13-16 September 2015, and the
second batch of 700 mines on 20-23 September 2015. The destruction of these stockpiled
anti-personnel leaves Oman with 13,734 stockpiled anti-personnel mines to destroy. The
President concluded that further information on a timetable for the destruction of Oman’s
stockpile of anti-personnel mines would be welcomed.

36. In information provided by Poland in 2015 in accordance with its Article 7
transparency obligations, Poland reported that information on stockpiled anti-personnel
mines remaining to be destroyed, its programme for the destruction of stockpiled anti-
personnel mines and the types and quantities of all stockpiled anti-personnel mines
destroyed since entry into force was the same as that provided in 2013. In 2013, Poland
reported that there were 16,597 PSM-1-type stockpiled anti-personnel mines owned or
possessed by Poland, or under its jurisdiction or control as of 1 June 2013. In 2013, Poland
further reported that the process of destroying stockpiled anti-personnel mines had started
in 2011, that all remaining stockpiled anti-personnel mines had been gathered in five
central storage facilities in 2013, and that a contractor for the destruction of the mines
would be chosen in 2014.

37. At the Convention’s June 2015 intersessional meetings, Poland clarified that, in
March 2015, Poland signed a contract related to the destruction of these 16,597 mines with
the NATO Support and Procurement Agency and that stockpile destruction should be
complete in June 2016.

38. At the Fourteenth Meeting of the States Parties in December 2015, Poland informed
that by September 2015, the remaining 16,957 PSM-1 anti-personnel mines were
transported to the place where the destruction process is conducted. The contract signed
with the NATO Support and Procurement Agency in March 2015 stipulates that the
destruction is concluded 6 months after transportation is concluded, that is by March 2016.
On the basis of the progress achieved, Poland confirmed that it should fulfil its obligations
under Article 4 well before its 1 June 2017 deadline.

39. In information provided by Poland in 2016 in accordance with its Article 7
transparency obligations, Poland reported that during the course of 2015, the 16,957
stockpiled anti-personnel mines as well as a number of anti-personnel mines components
were transferred to Germany for the purpose of destruction. Poland further reported that the
16,957 stockpiled anti-personnel mines were irreversibly dismantled before being
transferred.

40. At the 19-20 May 2016 Convention’s intersessional meetings, Poland reported that
the projected completion date is the end of June 2016 and that it was hoping that it could
inform about completion of the destruction of all its stockpiled anti-personnel mines at the
next Meeting of the States Parties.

41. On 26 July 2016, the President wrote to Poland to request updated information on
the status of Poland’s stockpile destruction programme as of June 2016 and on the total
number of stockpiled anti-personnel mines destroyed by Poland upon completion. On 18 August 2016, in reply to the President’s request, Poland indicated that the final report of the completion of the destruction or official information confirming the completion of the stockpile destruction process had still not been received from the NATO Support and Procurement Agency (NSPA). Poland further indicated that once official confirmation will be received, the President will be informed. The President concluded that Poland had provided updated information and noted Poland’s commitment to fulfil Article 4 obligations before the deadline.

42. In information provided by Germany in 2016, in accordance with its Article 7 transparency obligations, Germany reported that in 2015, the ammunition disassembly and recycling company “SPREEWERK LÜBBEN GmbH” in Germany received components of 16,957 anti-personnel landmines of type PSM-1 in transfer from the Military Property Agency in Poland for the purpose of destruction. The President noted the importance of continued transparency on this issue and concluded that it was positive that Germany provided information on stockpiled anti-personnel mines that had been transferred to its territory for the purpose of destruction by another State Party.

43. At the Convention’s June 2015 intersessional meetings, Ukraine indicated that 5,584,373 stockpiled anti-personnel mines remained to be destroyed and provided the quantity of each type of anti-personnel mine held. Ukraine also reported that it had destroyed 1,219,008 stockpiled anti-personnel mines and provided the quantity of each type of anti-personnel mine destroyed.

44. At the Fourteenth Meeting of the States Parties in December 2015, Ukraine reiterated that it had destroyed 1,219,008 anti-personnel mines and provided the quantity of each type of anti-personnel mine destroyed (401,200 PMN; 8,060 PMD-6; 238,000 POMC; 568,248 PFM; 3,500 OCM; all remaining stocks of PMN and PMD-6 type mines had been destroyed). Ukraine further reiterated that 5,584,373 stockpiled anti-personnel mines remained to be destroyed and provided the quantity of each type of anti-personnel mines (5,434,672 PFM; 149,096 POMC; 605 OCM-4). Ukraine reiterated that the 605 OCM-4 mines are located in areas outside of Ukraine’s effective control. All other stockpiled anti-personnel mines which remain to be destroyed are located at 6 arsenals under the control of Ukraine. Ukraine reported that 332,352 stockpiled PFM-1 type mines had already been destroyed at the Pavlograd Chemical Plant and that the Plant has a capacity of destroying 600’000 PFM-1 type mines per year. Ukraine further informed that the Pavlograd Chemical Plant and the Space Agency of Ukraine are currently exploring possibilities of further disposal of PFM-1-S type mines to fully comply with the Convention.

45. In information provided by Ukraine in 2016 in accordance with its Article 7 transparency obligations, Ukraine reported that 5,564,429 stockpiled anti-personnel mines remained to be destroyed as of 1 January 2016. Information was provided on the quantity of each type of anti-personnel mine held. Ukraine also reported that 605 of the stockpiled anti-personnel mines that remain to be destroyed are in areas outside of Ukraine’s effective control. In addition, Ukraine reported that, during the period 1 January 2015 to 1 January 2016, 19,944 stockpiled anti-personnel mines had been destroyed.

46. At the 19-20 May 2016 Convention’s intersessional meetings, Ukraine indicated that as of 1 April 2016, it had destroyed 1,452,504 anti-personnel mines and that 5,350,877 mines (including 5,201,176 PFM-type, 149,096 POM-3 and 605 OCM-4) remained to be destroyed. The President noted that, Ukraine, in reporting that 5,564,429 stockpiled anti-personnel remained to be destroyed as of 1 January 2016 in its transparency report and then reporting that 5,350,877 remained to be destroyed at the intersessional meetings implied that Ukraine destroyed 213,552 mines have been destroyed between January and April 2016. However, Ukraine indicated that in total 1,452,504 have been destroyed as of 1 April
2016, 233,496 mines more than the number communicated at the 14MSP in December 2015. The President further noted that it would be welcome if Ukraine could clarify the total number of stockpiled anti-personnel mines destroyed by Ukraine and on 26 July 2016 the President wrote to Ukraine to request clarification.

47. On 16 August 2016, in reply to the President’s request for clarification, Ukraine indicated that as of August 2016, 2,028,288 anti-personnel mines have been destroyed. The President concluded that Ukraine had provided information in accordance with Action #6 of the Maputo Action Plan.

48. The President concluded that based on the updated transparency information provided by States Parties in 2016 or on information previously provided, the following is understood to be the quantity of anti-personnel mines destroyed and remaining to be destroyed by Belarus, Greece, Poland, Oman, Poland and Ukraine:

<table>

Maputo Action Plan, Action #7:

49. In the Maputo Action Plan, it was agreed that "each State Party which discovers previously unknown stockpiles after stockpile destruction deadlines have passed will inform the States Parties as soon as possible, report pertinent information as required by the Convention, and destroy these anti-personnel mines as a matter of urgent priority and no later than six months after the report of their discovery."<sup>10</sup> Since the Fourteenth Meeting of the States Parties in December 2015, the following States Parties provided updated information on the destruction of previously unknown stockpiled anti-personnel mines:

50. In information provided in 2016 by Afghanistan in accordance with its Article 7 transparency obligations, Afghanistan reported that, during the period 1 January 2015 to 31 December 2015, 329 previously unknown stockpiled anti-personnel mines had been

<sup>4</sup> Source of information: statement delivered by Belarus, Intersessional meetings, 20 May 2016. The number of stockpiled anti-personnel mines destroyed is as of May 2016.

<sup>5</sup> Source of information: Article 7 report submitted by Belarus in 2016. The number of anti-personnel mines remaining to be destroyed is as of January 2016.

<sup>7</sup> Source of information: initial Article 7 report submitted by Oman in 2015.

<sup>8</sup> Source of information: statement delivered by Ukraine at the intersessional meetings, 20 May 2016.

<sup>9</sup> Source of information: statement delivered by Ukraine at the intersessional meetings, 20 May 2016.

<sup>10</sup> Maputo Action Plan, Action #7.
destroyed by weapons and ammunition disposal (WAD) teams. Information was provided on the quantity of each type of anti-personnel mine destroyed.

51. In information provided in 2016 by Cambodia in accordance with its Article 7 transparency obligations, Cambodia reported that, during the period 1 January 2015 to 31 December 2015, 16 stockpiled anti-personnel mines had been destroyed by the Halo Trust. Cambodia further reported that these mines were found and delivered by military personnel.

52. The President concluded that some States Parties report anti-personnel mines retained for purposes permitted under Article 3 of the Convention as “stockpiled anti-personnel mines.” The President recommended that, to ensure clarity and avoid double counting, anti-personnel mines retained for permitted purposes should not be reported as “stockpiled anti-personnel mines” and should be reported separately. The President also recalled that the draft guide to reporting could assist States Parties in providing transparency in an unambiguous manner on matters concerning both Articles 3 and 4 of the Convention.
