"I'll have to take my chickens home first," said Bruin.

"I haven't time to wait for you to run home and then for you to come back," answered Reynard.

"Well, I'll have to take the chickens home first, because I can't carry the cheese and the chickens both," said Bruin.

"I'll help you carry your chickens after you get the cheese," said the fox.

So they started off in the direction of the trap. As soon as he caught sight of the cheese Bruin said in an excited way, "O Reynard, I can get the cheese lots quicker if you will hold these chickens."

As Reynard took the chickens Bruin rushed after the cheese. As soon as he touched the cheese—snap! went the door and the bear was caught.

As Reynard ran down the path on his way home he laughed and cried out, "Ha! ha! ha! Uncle Bruin, how do you like the cheese? I'll have a feast with my little ones eating your chickens."

TEACHERS' SPIRITUAL REWARDS

Teachers who do their work well and who, either in fact or by faith, see the world made better as a result; individuals made healthier, wiser, happier; sin and suffering made less; the common wealth made more; social purity and civic righteousness increased; public laws made more just; patriotism broadened and purified; State and Nation made stronger and safer against attack from without and decay from within; and the world lifted onto a higher plane and into a brighter sunshine and a purer atmosphere, are possessed of wealth unseen and for most unseeable.—P. P. CLAXTON, Commissioner of Education.

When we measure the services rendered by the schools we cannot escape the belief that society is not making sufficient contribution for their support.—JAMES M. COX, Democratic candidate for President.

A BOOK OF OUTSTANDING IMPORTANCE

**BRIGGS' *The Junior High School***

And still they come. Three texts on the Junior High School within a twelve-month is a good record and the best of it is that each is better than the last, as of course it ought to be. The first was Bennett's (see *The Virginia Teacher*, March, 1920) which impressed one, as every first book in so large a field, as a sort of scrapbook of information and opinion, combined with the personal experience of the author, himself a practical schoolman. Next was that of Koos, (see *The Virginia Teacher*, July, 1920) a definite effort to set forth a logical consideration of the factors that have entered into the establishment of this type of school and the probable readjustments in school curricula and organization that will follow. *The Junior High School*, the third of the number, by Professor Briggs, of Teachers College, Columbia University, is the result of ten years of study of and instruction regarding this problem, and bids fair, as a scientific treatment of the matter, with its pages literally a mass of statistics summarized in some 80 tables, not to be surpassed for some time.

The fourteen chapters of this book cover a wide range of topics, including the historical development, claims and objections, curricula and courses of study, methods of teaching, buildings, costs, and results.

The groundwork is laid in the first three chapters, occupying nearly one-third of the book. In the first, are taken up the needs for reorganization of our present school system; for example, the non-flexible and traditional grouping of grades, the lack of relation of the work of the elementary school to life situations, the lack of progress of the average grammar grade pupil, the need of men teachers as well as woman teachers for early adolescence, the lack of provision for individual differences and needs, and the
need of more personal, vocational, and educational guidance. On this basis a summary statement of the functions of the intermediate period in education is made as follows:

"First, to continue, in so far as it may seem wise and possible, and in a gradually diminishing degree, common, integrating education; second, to ascertain and reasonably to satisfy pupils' important immediate and assured future needs; third, to explore by means of material in itself worthwhile the interests, aptitudes, and capacities of pupils; fourth, to reveal to them, by material otherwise justifiable, the possibilities in the major fields of learning; and, fifth, to start each pupil on the career which, as a result of the exploratory courses, he, his parents, and the school are convinced is most likely to be of profit to him and the State."

The history of the movement is then treated briefly, giving opportunity for definitions of the junior high school, of which the author believes there now exists a total of some 800 scattered widely throughout the union. Tables B and VI give very interesting and valuable data as to the essential criteria of the junior high school from the statements of a large number of the leading educators of the country. Apparently the foremost consideration is that of curriculum differentiation to serve the individual differences of pupils, for these differences seem to be enhanced at the early adolescent period when vocational interests are beginning to take shape. It is hopeful indeed if so fundamental a principle is actually at the basis of so fundamental an educational transformation, and not merely chance, opportunism, or imitation. Following this, a number of real and apparent objections to the junior high school are discussed, the author finding that most of these will probably prove to be directed at temporary or remediable conditions.

The remainder of the text is devoted to types of problems with which the school administrator is bound to be confronted, and which are treated not only with a general statement of fact but with statistical data, based upon the author's wide observation of schools and the answers to questionnaires by some three hundred interested people. The range and value of this data may be seen from the following titles of tables: Credits for entrance into the senior high school, percent-ages of pupils electing the different courses in the junior high school, the prevalence of offerings of the various school studies in different junior high schools, the experience of teachers, the salaries of teachers, length of school periods, the use of advisers, etc. The superintendent or principal who is seriously considering the organization of his schools to include the junior high school can turn to these chapters and find his questions as to typical practice answered in most important matters.

Of particular interest is Chapter XIII, entitled Results. The author points out that it is really too early, especially in the light of the lack of standardization of this ten-year-old institution, to judge clearly of results. He concludes as follows:

"In so far as the data are representative, they show that junior high schools do tend to increase the enrollment of pupils of early adolescence, especially of boys, to retain them longer in school, to bridge the gap between the elementary grades and the high school, to furnish better provisions for pupils of varying abilities and needs, and to increase the interest, school spirit, and community support. On the other hand, the data show that much yet remains to be done in the rewriting of courses of study and in the improvement of instruction, particularly in academic subjects to be continued in high schools. The junior high school must still be considered an opportunity rather than an achievement."

The author therefore makes no effort to outline a standard or ideal junior high school as do Koos and Bennett. He does contend that, from the number of schools established, the wide geographical location of these schools, and the consensus of opinion among educators, the school is already accepted in theory. "There is a demand for purposes so clear and so cogent that they will result in new curricula, new courses of study, new methods of teaching, and new social relationships—in short, in a new spirit which will make the intermediate years not only worth while in themselves, but also an intelligent inspiration for every child to continue as long as profitable the education for which he is by inheritance best fitted."

Mention is made of the type of junior high school needed in rural communities, and sample community developments are briefly alluded to. The treatise as a whole, however,
as former treatises, is devoted largely to the city type. The median numbers of pupils in the schools investigated is about 250, while a very few have less than 75 or 100, the usual number in Virginia rural junior high schools. The task of writing a standard treatise on such a school remains to be done and is a very urgent need. Similarly special treatises on junior high school methods of teaching and on the special subjects or studies of the curriculum need the patient and scientific elucidation given them that the general administrative problem of the city junior high school has been given by Dr. Briggs.

W. J. Gifford

INTERESTING OFFERINGS OF THE OCTOBER MAGAZINES

"An Empress in Exile" by Agnes Carey, an inmate of the English home of the Empress Eugenie. The Century.

"Vocational and Moral Guidance thru Dramatics," by Hazel M. Anderson. Education.

"A Plea for More Reading," by Grant M. Overton. The Bookman.

"Our civilization rests at bottom on the wholesomeness, the attractiveness, and the completeness, as well as the prosperity, of life in the country."—Theodore Roosevelt.

Owing to the unexpected continuance of the absence of local electric power, made necessary for repairs to the power plant, the printer of THE VIRGINIA TEACHER was unable to fulfill the contract for the September number. The present number represents, therefore, the September-October issues. All subscriptions and advertising contracts will be extended one month.

THE VIRGINIA TEACHER is reaching an increasing number of people of professional interests in the state and is planning an extension of its professional services to teachers in several ways. At an early date a number containing Teachers' Aids, representing contributions from every department of the school, will be issued. Beginning with the next issue, Dr. John W. Wayland will contribute a series of helps for the use of his recently adopted History of Virginia for Boys and Girls. As every number of THE VIRGINIA TEACHER will contain some special feature of prime importance to the teachers of the state, subscriptions should be sent in at once, that full benefit may be secured.
