GICHD, in partnership with others, strives to provide capacity-development support, undertake applied research and develop standards aimed at increasing the performance and professionalism of mine action. In addition, GICHD supports the implementation of relevant instruments of international law and manages the development and review of the International Mine Action Standards on behalf of the U.N. Mine Action Service to guide the planning, implementation and management of mine action programs.
5. MUAVs have a relatively short range of less than 10 km and usually weigh less than 30 kg. Their flight endurance is a maximum of 2

- hours and flight altitude is about 300 m.
6. Camcopter is a UAV produced by the Austrian company Schiebel. It was developed from 2003 to 2005. With a maximum takeoff weight of 200 kg, its endurance is 6 hrs. It has a maximum speed of 220 kph and a ceiling of 5,500 m. A 55-horsepower Diamond engine powers the Camcopter and can carry various payloads, such as electro-optics and infrared sensors.   10. The Sky-Watch Huginn X1 is a light helicopter UAV solution designed and manufactured in Denmark. The Huginn X1 is designed as a total solution capable of handling exterior and interior recon flights thanks to its interconnection of sensors. Huginn X1 is also the first of its kind that uses a multiplatform system, which makes it possible to change the airframe and upgrade the system without adjusting the autopilot. Its total autonomy ensures that the system can be used by anyone, from the experienced pilot to the novice. The Sky-Watch Huginn X1 can be used for visual reconnaissance in disaster areas, fence patrol and indoor inspection.
