bullets will, during the meeting, illustrate the talks. L. P. Benezet, leader.

The program of the conference on The School and the Community follows: Parent, Teacher and School, M. E. Moore; City Schools and Community Service, Paul C. Stetson; A Rural School Community Program, Mabel G. Bush; The Boy Scout Project, Loren W. Barclay; and School and Community Possibilities, Charlo O. Williams. Frank Cody, leader.

The program for the conference on Major Objectives of Elementary Education follows: How Shall We Select Subject Matter of the Elementary School Curriculum, William H. Kilpatrick; Reorganization of Subject Matter in the Elementary School, F. G. Bonser; Reorganization of the Elementary School to Meet Major Objectives, Charles L. Spain; Research in Relation to the Attainment Objectives in Elementary Education, Ernest Horn; Relation of Supervision to the Attainment of Major Objectives, Fred M. Hunter. Jesse M. Newlon, leader.

Other conferences include Civic Education under the leadership of Jeremiah Rhodes, San Antonio, Texas; Character Education, under the leadership of J. E. Burke, Boston, Massachusetts; Training Teachers in Service, under the leadership of J. M. Gwinn, San Francisco California; and Problems of Junior High and Intermediate Schools, under the the leadership of Ben G. Graham, New Castle, Pennsylvania.

The National Council of Education will hold three sessions Tuesday and Wednesday afternoons and Thursday mornings, February 26-28. Prior to these sessions a luncheon will be held in the French Room of the Congress Hotel, Monday afternoon at 12:30, February 25, for officers, chairmen and members of committees.

Tuesday afternoon, February 26, the Council will meet in the Playhouse theater. The program follows: President's Address; The Work of the Bureau of Education in Alaska, John J. Tigert; The Relation of Professional Spirit Among Teachers to Public Education and the Devotion of Citizenship, Olive M. Jones; Reports of the Committee on Reorganization of the National Council of Education, the Joint Committee on Health Problems in Education, and the Committee on Extension Education.

The Wednesday afternoon session, February 27, will be held in the Banquet Room of the Auditorium Hotel. Reports will be given for the Committee on the Status of the American Woman Teacher, the Committee on Illiteracy, the Committee on Vocational Education, and the Committee on State Funds for the Support of Elementary and Secondary Schools.

Thursday morning, February 28, 9:15 o'clock, a joint session will be held with the topic conference of the Department of Superintendence, dealing with Improvement of Teachers in Service, at which there will be reports of the Committee on American Teachers Colleges, the Committee on Training Teachers in service, and the Committee on Participation of Teachers in School Management.

THE PLACE OF INTELLIGENCE AMONG HUMAN ENDOWMENTS

One approaches a view of this work in these latter days with fear and trembling. There can be no half-way ground in one's attitude—you violently favor the author's way of looking at things, or you violently oppose it.

Nor do you marvel that at the University of Tennessee such a storm occurred as to shift the scholastic equilibrium of some half-dozen odd professors and all but blow the head off "The Hill." A cantankerish, modernish professor simply favored the point of view of Robinson. The president of the college fired the prof and his cohorts for the very valid reason that he held to a violent dissenting opinion.

Robinson, with some of the restraint that characterizes the scholar and some of the fearlessness which characterizes the innovator, pleads for a wider knowledge of truth. What that truth is, or may be, he does not pretend to say. In science, he contends, we have as a race achieved something of truth, while our religion and sociology remain an unimpaired heritage of the middle ages, or even of ancient times. He would have us bring mankind up to date.

This proposition calls into question our whole social system,—our morals, because our concept of human conduct is the thought of mind two thousand years ago; our institution of marriage for the same reason; and that great problem of sex because such notions as we have of the biologic relationship between male and female belong to the cogitations of the medieval mind that mistakenly regarded sex as something unclean. The author nowhere says that we should tear down these
established notions and institutions. He is no
iconoclast. Neither is he committed to their
perpetuation. He says simply that a study
of, a scientific approach to, our problems, is
what should take place. What may be done
afterwards by way of readjustment should be
the result of the findings of the truth. If it
should result in the destruction of our va-
rious theologies, our present form of racial
perpetuation, or our system of government,
he would contend that it was altogether fit-
ting that this should be so.

The use of intelligence—that is the solu-
tion. For, says the author, intelligence is the
rarest of human endowments. Man has a
mind made up of equal parts of the brute, the
savage, and the child. He is naturally hide-
bound with physical, moral, and mental iner-
tia. He despises to move; he despises to think
so terribly that he refuses almost utterly to
think. Whereas, taken by and large, of all the
millions of humanity created, scarcely one
great mind occurs each century. To their
customs, institutions, and habits of thought all
men are wedded. Conservatism is deep in
the seed of the race.

Wherefore the world wags on, and what
was good enough for his daddy for the most
part remains good enough for the son. Man
has conquered many of the forces of nature,
had solved many of the riddles of the universe,
but his own mind today remains what it has
always been: equal parts of the savage, the
brute, and the child.

Harry H. Kroll

A ROYAL ROAD IN NUMBER WORK

NUMBER PROJECTS FOR BEGINNERS, by Katherine
L. McLaughlin and Eleanor Troxell. Phila-
delphia: J. B. Lippincott Co. (Lippincott's

This little book proves that number work
can be presented in such an easy, natural
and delightful way that before one realizes
what is happening the child is imbued with
a desire to count, measure, divide, and sepa-
rate into parts as a result of that natural inner
urge which teachers are trying to awaken
in children today.

Instead of the old way of pouring a few
necessary number facts into the child, and
drilling constantly until the required amount
of work has been covered, this book gives some
very delightful experiences in number work
developed through various projects and ac-
tivities of some experimental kindergartens
and first grades.

It should be interesting and helpful to all
primary teachers. Mary E. Cornell.

OTHER BOOKS OF INTEREST

A TREASURY OF PLAYS FOR WOMEN, edited by
1922. Pp. 443. $3.00.

Mr. Shay includes fifteen one-act plays, one
two-act play, and two of five acts: Maeter
linck's "Death of Tintagiles" and Miss Mil-
lay's "The Lamp and the Bell."

But to select plays possessed of dramatic
intensity and suitable for only women to cast
was a problem, because, says the editor, most
of such plays were written "for girls' schools,
Sunday schools and institutions of like nature.
They are neither dramatic nor interesting."
This is nevertheless a valuable collec-
tion.

ONE-ACT PLAYS, by James Plaisted Webber and
Hanson Hart Webster. Boston: Houghton,

Eighteen one-act plays—"wholesome, intelli-
gible, and interesting"—classified as plays
of mood and character, dramatic episodes, and
plays of fancy. A fresh collection with ex-
cellent editorial trimmings, especially thirty-
four pages on "Fundamentals of Dramatic
Presentation" and a discriminating bibliogra-
phy.

A NEW ENGLISH GRAMMAR, by M. A. Leiper.
Pp. 362. $1.20.

Recognition of changing usage in language
and an infusion of numerous non-grammatical
idioms in the study of grammatical rules
gives to this textbook for teacher training in-
titutions a special appeal and a definite val-
ue.

THE MASTERY OF FRENCH, Book II, by G. P.
Fournerey. Syracuse: Iroquois Publishing
Co., Inc. 1923. Pp. 532. $1.76.

A direct method textbook complete in it-
self. The lesson-by-lesson vocabularies are
in an appendix with French and English
words on the reverse sides of the page.

HOW TO TEACH A TRADE, by R. W. Selvidge.
111. $1.00.

Four distinct phases of training are rec-
ognized by the author: (1) The things one
must be able to do, which represent skill;
(2) The things one must know, which repre-
sent information; (3) The problems one must
solve, which represent the calculations one
must make; and (4) The practical application
of these on real jobs.
