DDAS Accident Report

Accident details

Report date: 11/03/2004
Accident number: 42
Accident time: 12:27
Accident Date: 19/01/1995
Country: Mozambique
Where it occurred: Manhica minefield,
Manhica District,
Maputo Province
Primary cause: Field control
inadequacy (?)
Secondary cause: Inadequate training (?)
Class: Tripwire accident
Date of main report: 01/11/1995
ID original source: HB
Name of source: HB/NPA field
Organisation: [Name removed]
Mine/device: OZM-72 AP Bfrag
Ground condition: not recorded
Date record created: 22/01/2004
Date last modified: 22/01/2004
No of victims: 1
No of documents: 2

Accident Notes

inadequate training (?)
no independent investigation available (?)
inadequate investigation (?)
inadequate equipment (?)

Accident report

This accident is mentioned in the demining group's demining activity report for 1995. A single page summary of three accidents, dated 01/11/95, was made available by the demining group.
The victim set off an OZM-72 bounding fragmentation mine at about 12:27, and was killed. An internal investigation concluded that he had been rolling up a trip-wire as he was working his way towards the mine. This contravened safety procedures, according to which deminers should not touch trip-wires at all but should call a supervisor.

**Summary of injuries:**

INJURIES
- severe Chest
- severe Face
- severe Neck

FATAL

COMMENT
The victim suffered severe fragmentation injuries to the head, neck and chest. No medical report was made available.

**Analysis**

The primary cause of this accident is listed as a "Field control inadequacy" because the victim was working in an unsafe manner and was not corrected by his field supervisors. He may not have realised that he was working inappropriately, which would be an example of “Inadequate training”.

The failure to provide any realistic safety equipment was probably irrelevant in this instance (the mine was capable of defeating all armour currently used) but still indicates a significant management failing. The demining group began to supply 5mm full-face visors in this theatre in June 1999.

The “inadequate equipment (?)” noted refers to the issue of industrial safety spectacles as PPE.

The demining group failed to provide any report of the accident despite repeated requests.

**Related papers**

An agreement by the head office of the demining organisation to provide details in February 1999 was not honoured.

In a summary of the accident made available by the demining group’s Country Manager in March 2002, the victim’s injuries were described as “splinters on the head, neck and chest”.

---

2
He died “on the spot”. The demining group paid for his funeral and paid US$4,500 in compensation to his family.
