DDAS Accident Report

Accident details

Report date: 19/04/2006
Accident number: 70
Accident time: not recorded
Accident Date: 27/07/1995
Where it occurred: Bairro Horto, Kuito
Country: Angola
Primary cause: Field control inadequacy (?)
Secondary cause: Field control inadequacy (?)
Class: Excavation accident
Date of main report: [No date recorded]
ID original source: none
Name of source: Other
Organisation: [Name removed]
Mine/device: not recorded
Ground condition: not recorded
Date record created: 23/01/2004
Date last modified: 23/01/2004
No of victims: 1
No of documents: 1

Accident Notes

squatting/kneeling to excavate (?)
no independent investigation available (?)
inadequate investigation (?)

Accident report

No detailed report of this accident was found at the Angola MAC, or by the country office of the demining NGO involved. It was recorded on a summarised spreadsheet.

Because the demining group’s SOPs do not permit them to “handle” devices, it is inferred from the injuries that the accident occurred while prodding or excavating. The demining group approved squatting to prod and/or excavate at a later date and are assumed to have done so at this time.

The demining NGO involved may not have been issuing visors and vests at the time of this accident.
### Victim Report

</table>

### Summary of injuries:

**AMPUTATION/LOSS**

Arm

**COMMENT**

No medical report was made available.

### Analysis

The primary cause of this accident is listed as a "Field control inadequacy" because the injuries imply that the victim was prodding at the wrong angle and that his error went uncorrected. If he was not prodding he must have been handling the device, which would have been a breach of the demining group's operating procedures.

It is possible that the victim's arm was damaged by his handtool, as in other accidents among these records.

In 1999, the demining group's UK head office claimed not to keep copies of field accidents. This is now known to be untrue. The UK management's unwillingness to share data openly could be taken to imply that they sought to conceal things. Its field staff have usually shared the information that is available to them.

An agreement to share data made in June 2000 had not been honoured by the time of the release of this database.
