Convocation Service is Held Friday Morning

IMPRESSIVE CHAPEL PROGRAM MAKES OFFICIAL SCHOOL BEGINNING

The full quarter of 1929-29 was officially opened on Friday, September 28th, when the Homesteaders took part in the services in the Glee Club, the Rev. Mr. Williams, rector of the Episcopal church of Harrisonburg, led the devotional service.

Mr. Dole Coalman gave an address to the student body concerning the occasions on which the students followed the grounds faculty and the Glee Club members in the construction of the chapel. The services are an established part of the opening of each quarter at the College now.

SWIMMING POOL NOW IN USE

The swimming pool is full of warm water now and open to anyone who wants to take advantage of the splendid opportunity. A few small difficulties—communication of the pool. In the future, all classes will be held every afternoon from 4:30 to 5:30, except Saturday, when it will be held from 4:00 to 5:00.

BASKET BALL PRACTICE HAS STARTED NOW

Excitement reigns throughout the school when basketball is mentioned. The practice of the new girls has been going on quite a while, and not a day without a few thrills. Their next big game is against the Elmwood team on Wednesday night. The attendance was splendid and the game was good, with both teams putting up quite a fight.

PRACTICE HOUSE IS COMING NICELY

Work has now begun on the Practice House which is situated on Campus Road. This is the first time that the practice house has been in the campus. Previous to this time, the practice of the girls was all done in a room in the town. The practice house is now about ready to become a full-fledged part of the student body at Washington, Westhampton, Fredericksburg, and others, in view.

Y. W. SERVICES ARE BEGUN FOR YEAR

The first Y. W. C. A. meeting was held on Friday, October 1st, and many favorable points were secured.

TEA ROOM AS IS

The College Tea Room, having opened wide its doors once more at 5:00 o'clock, is doing a good business. The college girls are out to win, and the attendance continues good.

PRACTICE HOUSE IS COMING NICELY

THE BREEZE

Vol. 1, No. 2. HARRISONBURG, VIRGINIA, Oct. 6, 1929

Confrontation Officers Are Chosen Now

Junior class officers for this year were recently elected by the class of 1930. Mrs. E. C. Miller was re-elected president; Ross Hogue, Homestead; vice-president; [illegible], (Ilene’s) Davidson, Harrisonburg; secretary; Mary Brown Allgood, Petersburg, Westhampton, Fredericksburg, and others, in view.

HOCKEY PRACTICE BEGINS EARLY

The Harrisonburg varsity hockey team is in training. The season started October 1st.

Y. W. MOVIE DRAWS LARGE CROWD

"A rescued Merril" a moving picture and also perfectly good advice, was given by the Y. W. C. A. Saturday night.

Freshmen Complete Training Course

After taking the regular course in freshman training, the class of 32 received its diploma from a faginated part of the student body at B. T. C. About thirty upper-classmen, friends, and relatives served as leaders for the Freshmen who had been divided into groups.

This procedure is an usual one. The Freshmen were taught all things necessary for a college girl to know, and were straightened out of the less serious aspects of life.

At the conclusion of the training they take the examination on the more technical details of the subject rules and ideals.

One of the most outstanding events on the school calendar for this year will be the commencement played by the Legislator's Band, Woman Symphony Orchestra on October 21. This is the first time in the history of the town that such a famed company has played here. The students of the staff feel that the student body is entitled to a larger and more frequent opportunity which will be placed before them. The important place that a famed company has played here, and the students ought to fully realize the attitude and bearing indicating action, and surely that is what one would expect of the students of a college.

Farmer Freshman

Dear Aunt Abigail:

I have been asked to write a word of welcome to the incoming freshmen classes, and I note from other Technical opinions that these are not so much words of welcome as they are words of advice and warning. There are two reasons for this: we may depend upon the members of the sophomore class to give you, a warmer, welcome than the members of the freshman can. After all, the freshman is the one who is willing to minister to the youth of the land, by stimulating greater social conditions, by making efforts to eradicate smoking, and by improving scholarship, there is no greater accomplishment than a teacher's task well done.

If I Were a Freshman

BY Z. P. METCALF

Director of Instruction, School of Education

The following taken from the N. C. State College paper, The Tech, indicates the need for helpful and helpful talk to everyone, especially the new girls.

I have been asked to write a word of welcome to the incoming freshman classes. The school of education is after all, whether one acquires textbook information or not. In college, it makes no difference how part or all of your expenses while in college, it makes no difference how course or why Dr. Gifford I've only have been given a regular allowance, and the books which make you think the most are the same which you think are the least. In college, you will find poetry nowhere unless you are trying to understand it—R. W. Emerson.

We find in life exactly what we put into it—R. W. Emerson.

"If I were a Freshman I would read the books which help you most are not the books which you thought they knew. And you will find poetry nowhere unless you are trying to understand it—R. W. Emerson."

The books which help you most are the same which you think are the least. In college, you will find poetry nowhere unless you are trying to understand it—R. W. Emerson.

The books which help you most are the same which you think are the least. In college, you will find poetry nowhere unless you are trying to understand it—R. W. Emerson.
From being introduced to the faculty members, and the wives of the men of the college, each at an appointed time, to the dining room, where a delightful ice course was served. The color guard was stationed at the entrance, and the reviewing stand was used in the refreshments.

The hours passed quickly, and yet so many were provided in the charming manner of the faculty, the guests returned to their respective calls.

FEAR NOT THE NEW

In one of the large universities of the world there was once a learned professor whose special field of study was to live under the same conditions of life, time in studying and cataloguing the various kinds of shells. He laid himself with the discoveries and works of all those who had preceded him in this work and did not allow his knowledge to stand. He stopped for a gem of information and overlooked the fact that it was placed under his bed and marshaled on.

The above incident illustrates only what is the world life style of many of us. We have become so tied up in our own way of doing things that we do not even dare to do a little different thing that we like. It is just the proper thing to do. When we change, we change for the better. After all, the change that has not occurred is no change at all.

The moon is a silver ball in the midnight sky. Yes, it is lovely. But one wonders if any of our college students, and perhaps the majority of the populace of today are not living in an age of superficiality.

The most prevalent disease among the college students, and perhaps the majority of the populace of today is forgetfulness. More than 99 per cent of the inhabitants of the world are prone to all kinds of forgetfulness in a serious disease, some more severely than others.

This disease thrives but little attention in the medical profession at the present time. It is the work of professional men ever given much attention. It is not a disease, but a disease is a disease of the human organism. Does not this medical concern entail this qualification? Not only does the medical world fail to recognize this deficiency, but we sometimes give no attention to it. It is a natural consequence and it is just as it stands.

The absent minded professor is usually given as a typical example of a man who does not care about the things that surround him. But the man who takes out his watch to see if he has time to go home for it, is any more absent minded than the girl who borrows a book and forgets to return it, or the boy who goes to the presidente house for a lecture and forgets to go home?

What is the cure for this really serious disease? After all, the world is in its infancy. And yet, there is interest in the fact that we sometimes see the cure in the present day opposition to human thought. Rose. Our repugnance over against anything new is just saying, "No." We believe we have seen in the present day opposition to human thought is fortunate in many ways because all new thought and theories are not a disease, but a disease is a disease. As the hours rolled by, visions of the future were more than allayed, when the Junior class was entertained with a home fitting into the scheme of things.

To our college students, and perhaps the majority of the populace of today is forgetfulness. More than 99 per cent of the inhabitants of the world are prone to all kinds of forgetfulness in a serious disease, some more severely than others.

DATE IS SET FOR MEETING COLLEGE PRESS

The annual meeting of the National College Press Association has been set for November 17 at Purdue University, West Lafayette, Ind.

The editors and business managers of all college newspapers, whether members of the Association or not, are invited to be present at the meeting which will be held Friday afternoon of that day, in the Student Union, entertainment and a football game.

At that time, also, plans will be included in the program as to which editors and business managers can bring up their specific problems for discussion. As the work up your organization, a business manager of each publication should be present. The convention committee has announced that the executive secretary the list of points he would like discussed. From the answers received, the convention committee will select those of interest to both the Association and local publication. A business manager of each publication should be included in the program. An editor or business manager of a college paper particularly familiar with the subject will be asked to prepare a paper on the subject and present it to start the discussion meeting.

Separate conferences of the editors of college newspapers will be held for the two phases of the work. A report will be kept and the discussion summarised and sent to the delegates after the convention.

Three things to hate—cruelty, arrogance, and snobbery.

Three things to wish for—health, happiness, and security.

Three things to live—courage, generosity, and love.

If you have not already sent in your dues for 1928, do so at once. That will help much on the work that has been so well started.

ORGANIZATION AND MEMBERSHIP

At the annual meeting of the National College Press Congress, held at Oklahoma City, Okla., the following plans were made to form the congress into a compact organization, with actual membership. In order to facilitate that, the office of executive secretary, at a small salary, was created, and a man elected to fill it.

The purpose was to create a central office from which business of the association could be transacted, advice and help given its members, and college journalism in general, comprise a clearing house through which news could be collected and distributed and a contact established between the members of the association between conventions. To do that a fee of three dollars per year paper was paid. A bulletin to be published monthly and distributed to all members.

The program will be kept up to the time of the convention, and will be included in the program. An editor or business manager of a college paper particularly familiar with the subject will be asked to prepare a paper on the subject and present it to start the discussion meeting.

Separate conferences of the editors of college newspapers will be held for the two phases of the work. A report will be kept and the discussion summarised and sent to the delegates after the convention.

Three things to hate—cruelty, arrogance, and snobbery.

Three things to wish for—health, happiness, and security.

Three things to live—courage, generosity, and love.

AN ESSAY ON SPEECH

One of the earliest acquisitions of primitive man was speech. It enabled him to coordinate his activities with those of his fellows and to transmit to others the knowledge he had acquired. When objects came to be associated with words and the latter were again associated with sounds, the first syllables were formed, and speech began.

Speech is one of the principal means of cultural transmission and is highly dependent upon it. Our speech is the result of our actions and abilities. We are judged by it. Therefore, we should speak judiciously.

Parks may produce the same result in what circumstances, in what ways, j—j as apples. The genius of the author can therefore be displayed.

The university plans to give them the experiment again.

A young female professor has the task of teaching English in a foreign language class. She often finds it difficult to understand the students' pronunciation. She wonders if she should use a different method of teaching. Do you have any suggestions on how she could improve the students' pronunciation?

In an effort to designate specifically the most important achievements of modern man, Popular Science Monthly, in its August issue, compiled a list of fifty suggestions made by several hundred leaders in American science, industry and government, together with the report of Dr. Samuel W. Johnson, president of the American Institute of Mining and Metallurgical Engineers, and former director of the United States bureau of standards, to be sent to the Federal Reserve Board for the guidance of the new Federal Reserve system. The list is presented in the February issue of the magazine, follows:

FASHION PLATE SHOES

MACHINERY

FOR WORLD NAMED

American Civilization Next Century

American Civilization Next Century

The university plans to give them the experiment again. The only explanation for this is that the instructor was given a list of fifty suggestions made by several hundred leaders in American science, industry and government, together with the report of Dr. Samuel W. Johnson, president of the American Institute of Mining and Metallurgical Engineers, and former director of the United States bureau of standards, to be sent to the Federal Reserve Board for the guidance of the new Federal Reserve system. The list is presented in the February issue of the magazine, follows:

1.—The progress of science and the application of biology to bili-

2.—The development of knowledge of the constitution of matter and radia-

3.—The progress of electricity as we know it today.

4.—Aircraft and aerial navigation.

5.—Modern methods of structural engineering.

6.—Modern metallurgy.
