DDAS Accident Report

Accident details

Report date: 18/05/2006
Accident time: not recorded
Accident number: 195
Accident Date: 06/01/1994
Country: Cambodia

Where it occurred: Kleng Por, Svay Chek Commune, Banteay Meanchey Province

Primary cause: Field control inadequacy (?)
Secondary cause: Field control inadequacy (?)

Class: Excavation accident

ID original source: none
Name of source: HT (field)

Organisation: Name removed
Mine/device: POMZ-2M AP frag

Date record created: 14/02/2004
Date last modified: 14/02/2004

No of victims: 1
No of documents: 1

Accident Notes

inadequate investigation (?)
no independent investigation available (?)

Accident report

No documentation was made available by the demining group’s country office. The accident was recorded on their own spreadsheet of past accidents.

The country MAC had no record of this accident in January 1999.

The demining group issued frontal protection and their drills assumed the deminer would kneel or squat while excavating.

The accident classification is inferred from the injuries, although with a fragmentation device it is accepted that the activity may well have been otherwise. The injuries bear similarity to
accidents involving an MUV fuse for a POMZ rather than those where the victim is in close proximity to the mine blast.

Victim Report

Victim number: 248
Name: Heun Youen
Age:
Gender: Male
Status: deminer
Fit for work: not known
Compensation: not made available
Time to hospital: not recorded
Protection issued: Safety spectacles
Protection used: not recorded

Summary of injuries:
INJURIES
severe Eye
AMPUTATION/LOSS
Finger
COMMENT
No medical report was made available.

Analysis
The primary cause of this accident is listed as a "Field control inadequacy" because it seems likely that the victim was not wearing his safety spectacles and may also have been working dangerously without correction.

The demining group's field office did not have any detail of this accident on file, although confirmed it had occurred. Access by the researcher to their field operations (where long-serving staff could have been questioned) was denied because their expatriate supervisor was out of the country.

If the victim was wearing the equipment used by the demining group at that time, he would have been wearing industrial safety spectacles, similar to the country MAC's issue.

In 1999, the demining group's UK head office claimed not to keep copies of field accidents. This is known to be untrue. The UK management's unwillingness to share data openly could be taken to imply that they sought to conceal things. Its field staff have usually shared the information that is available to them.
