### Accident Notes

visor not worn or worn raised (?)

inadequate investigation (?)

### Accident report

Details of this accident have been withheld by the demining NGO that employed the Victim. A spreadsheet including the Victim’s name and very brief details of the accident was made available in 2007. Some details can be inferred from the information released. For example, the injury implies that the victim’s visor was not being worn in the correct manner, and the loss of one eye and severe injury to the other implies a severe facial injury.

This entry will be expanded if access to the report of the investigation is made available in future.

The spreadsheet data is reproduced below, edited for anonymity.

“Date and country. [Name removed] – deminer: Loss of left eye, injuries to right eye.

VS50 mine exploded in minefield.”
Victim Report

Victim number: 615
Person: [Name removed]
Age: 
Gender: Male
Status: deminer
Fit for work: not known
Compensation: Not made available
Time to hospital: Not made available
Protection issued: Not recorded
Protection used: Not made available

Summary of injuries:
severe Eye
severe Face
AMPUTATION/LOSS: Eye

COMMENT: No Medical report was made available.

Analysis
The primary cause of this accident is listed as a “Field control inadequacy” because the Victim was working with his visor raised (or not worn) and his error was not corrected.

The secondary cause is listed as a “Management control inadequacy” because the management of the demining group declined to make the accident details available. Although this is sometimes done to protect the Victims, in this case the Victim’s name was among the limited detail made available. It is possible that the managers have chosen to avoid transparency because they are afraid that the circumstances of the accident would reflect badly on their organisation.
