Accident details

Report date: 05/03/2011  Accident number: 639
Accident time: 07:10  Accident Date: 10/07/2008
Where it occurred: Charyan Village, Jaji  Country: Afghanistan
District, Paktya Province
Primary cause: Field control inadequacy (?)  Secondary cause: Management/control inadequacy (?)
Class: Excavation accident  Date of main report: Not recorded
ID original source: DA20  Name of source: UNMACCA
Organisation: [Name removed]  Ground condition: not recorded
Mine/device: PMN AP blast  Date last modified: 05/03/2011
Date record created:  No of victims: 1  No of documents: 1

Accident Notes

inadequate investigation (?)
use of pick (?)
squatting/kneeling to excavate (?)
visor not worn or worn raised (?)
Inadequate detector pinpointing

Accident report

The only report of this accident that has been made available to date was in a UNMACA EXCEL spreadsheet. Text in square brackets [ ] is editorial. This record will be revised if more information is made available.

The EXCEL summary is reproduced below, edited for anonymity.
No. # Accident: DA20
Demining group: [Demining group]
Date of Accident: 10\textsuperscript{th} July 2008  07:10
IMSMA ID: [None]
Accident/Incident: Demining accident
Name: [The Victim]
Type of Casualty: Injured
Type of injury: Injuries in his hand, face and also two fingers may have cut
Title: Deminer
Team No: DT23
Task No: [None]
Activity of Victim during accident: Prodding
Type Device: PMN
Equipment Damaged: [None]
Village, District, Province: Charyan Village, Jaji District, Paktya Province
Investigation  Completed Y/N: Y
Action Taken by NGOs (Y/N): Y
BOI Conclusions:
1. Poor supervision by command group is the main contributing factor for this accident as the deminer was working with pick and kept his visor up, but nobody has controlled him.
2. Carelessness of the deminer can also be counted as a contributing factor to this accident, as in such a heavily contaminated minefield he was working with pick without using his visor in a proper way.

Victim Report

Victim number: 822  
Name: [Name removed]
Age: 
Gender: Male
Status: deminer  
Fit for work: not known
Compensation: Not made available  
Time to hospital: Not made available
Protection issued: Not recorded  
Protection used: Not made available

Summary of injuries:
INJURIES: severe Face, severe Hand
AMPUTATION/LOSS: Fingers
COMMENT: No Medical report was made available.
Analysis

The primary cause of this accident is listed as a *Field Control Inadequacy* because the Victim was working with his visor raised and using a pick and his error was not corrected. The secondary cause is listed as a *Management Control Inadequacy* because the demining group's management is responsible for ensuring that field supervisors prevent deminers from breaching approved SOPs.

It is possible that the Victim failed to pinpoint the metal-detector reading adequately (as has been reported in other accidents around this time) and so started to excavate on top of the mine.

The "Inadequate investigation" listed under notes refers to the absence of a full accident report. The UN supported MACCA has failed to make these widely available for some years in contravention of the requirements of the IMAS. The failure of the UN to share the Afghan investigators’ work with others is regrettable.
