## **Analysis**

The primary cause of this accident is listed as a *Field Control Inadequacy* because the investigators found that no Quality Control was conducted, from which it is inferred that field supervision was lacking. The secondary cause is listed as *Other* because the summary does not contain enough detail to infer the activities at the time of the accident.

The “Inadequate investigation” listed under notes refers to the absence of a full accident report. The UN supported MACCA has failed to make these widely available for some years in contravention of the requirements of the IMAS. The failure of the UN to share the Afghan investigators’ work with others is regrettable.
