Suggested training uses

PLEASE READ THIS.

By accessing these records you are agreeing to be restricted by the following...

This resource is provided as a tool for those working in Humanitarian Demining or engaged in work in support of the aims of Humanitarian Demining. While every effort has been made to ensure that the data herein is accurate, the author and distributors accept no liability for errors or omissions or any loss resulting from the use of records provided here.

Reproduction for publication of any data provided is expressly prohibited. Do you agree to this condition? If not, please stop using this website.

Please preserve the principle of victim anonymity that I established in 1998 when I started to collect accident data.

The most common use of these records in training is to provide an example of what happens when things are done in the wrong way. This can be a powerful reinforcement of a lesson about doing things the right way. The database can also be a training aid for paramedics and for field and office managers.

The links below only take you to a few examples of accidents that illustrate the need for appropriate equipment, training and disciplined procedures in demining. There are many others among the database records.
