## Hessler's Junior Science

for  
Virginia Schools

John C. Hessler, noted scientist and teacher, has written Junior Science for High School beginners in a style that is **simple, direct and forceful**. Philosophic discussion is omitted while technical terms and mathematical formulae are reduced to a minimum. The useful facts of science are presented in an interesting scientific manner.

The **problem method** of presenting knowledge used in this book is **unique**. Each paragraph is introduced as a **problem**, which immediately arouses the pupil's **interest** and stimulates his **thought**.

The text is exceptionally **practical** in both content and presentation. The author's aim is to stimulate interest in **common phenomena**, and show the usefulness of science in its innumerable applications to everyday living.

**Junior Science** is the best **balanced** text book in its selection of material—it is neither chemistry, physical geography, nor biology, yet it covers all the sciences, and selects the most **fundamental ideas** used in the pursuit of scientific study, and in the interpretation of our complex environment.

The **mechanical features** of this book are excellent. The page is large and open, the **print is large**, important ideas are emphasized in **heavy black type**, with numerous **diagrams**, an excellent **summary** and a list of **review questions**.

A **Laboratory Manual**, suggesting many interesting problems, selected from our **everyday experiences**, follows the course of the text. These experiments can be solved with a minimum amount of apparatus. There are suggestions to teachers, list of material, apparatus, etc.

**Hessler's Junior Science** approaches the **ideal** in a beginner's text book. Your pupils deserve the best.
